### **Overview**

The Arista Cognitive Campus 720XP series switches deliver connectivity and power for all campus user workloads, under the management and monitoring of Arista Cognitive Campus Services. The suite of platforms offer a variety of connection options for user desktops, PoE appliances and IoT devices. Managed 802.3af/at/bt power services deliver up to 60W per RJ45 port, with speed options ranging from 10Mbps to 5Gbps. Modular SFP+ and QSFP+ uplinks support speeds from 1Gbps to 100Gbps delivering network design flexibility and scalability.

Arista's common binary EOS provides a comprehensive, standards based, layer 2 and 3 feature set that includes EVPN virtualization and QoS services. EOS supports standards based 802.1X access control, and LLDP device identification services to automate admission and segmentation of users, appliances, plus all mission critical voice, video and general purpose applications in the campus. Together, Arista's family of switching and WiFi platforms are managed through a single Cognitive Campus management plane in CloudVision, providing sub-second real time telemetry, database archival and automated analytics to manage and monitor the infrastructure, users and applications in the Campus-Cloud Network.

# **Cognitive Campus**

The Cognitive Management Plane (CMP) in Arista's EOS provides rich control and telemetry APIs used to simplify and automate the deployment, and maintenance of campus infrastructure while also providing real-time monitoring of campus users, applications and devices. As with all Arista platforms, EOS supports auto provisioning by way of Arista Zero Touch Provisioning (ZTP) to simplify device administration through CloudVision, or popular DevOps toolsets. In addition to legacy polling management, EOS CMP delivers real time telemetry to administrators using open GRPC/GNMI APIs used in OpenConfig, allowing administrators to create custom management tools.

# Campus Leaf PoE | Model Overview

Driving the campus CMP in the 720XP is the Broadscan hardware telemetry feature, native in the 720XP series switching processor. Broadscan delivers real time updates for all device state, performance statistics, and application flows, without burdening other system functions. Over a thousand unique flows can be concurrently tracked per switch, with hardware support to scale to 32K flows. Device fingerprinting features are also supported, allowing the 720XP to identify connected device type, operating system and user id, helping facilitate security audits and workgroup/workload segmentation.

With the rich telemetry of the 720XP, Arista's CloudVision tracks application, user and device activity, measuring throughput and

latency of key applications, user and device flows. CloudVision Device Analyzer (pictured above) baselines real time traffic to help alert administrators of performance or security outliers.

## **Customizable Topologies for Optimized Performance**

As with all Arista devices, the 720XP switches support open, standards based, L2 MLAG and L3 ECMP load balancing features. Administrators can employ either scheme to deliver high availability load sharing at the core, building or intermediate distribution frame. The 720XP's Dynamic Load Balancing (DLB) feature improves on typical load sharing by dynamically tracking flow volumes and rebalancing them across shared links to optimize network utilization. DLB interoperates with other networking platforms, helping administrators improve the performance of their installed campus infrastructure.

Dynamic Load Balancing monitors flow rate to better distribute network traffic

The 720XP uses standard RJ45, SFP+ and QSFP+ interfaces for in closet and uplink interconnections, giving administrators the freedom to choose the right media type and speed that suits campus use cases and their budget. In addition to the variety of SFP+ and QSFP+ copper and fiber modules that support speeds from 1Gb-100Gb are the new 10G/25G multi-rate SFP+ optical modules. These economical optics allow administrators to invest in 25Gb but still run in 10gb mode while connected to legacy infrastructure, thus simplifying campus migrations.

# **Cognitive Segmentation**

The 720XP series supports industry standard 802.1X authentication schemes and interoperates with leading authentication solutions. Authorized users and devices can be automatically segmented into assigned 802.1Q or EVPN VXLAN segmented networks, facilitating infrastructure and data security. Wire-speed layer 3 VRF segmentation is also supported, giving administrators additional flexibility for supporting the most sophisticated campus use cases. The 720XP switches also help administrators with WiFi segmentation by providing hardware based VXLAN de-encapsulation of tunneled WiFi traffic.

## **Cognitive PoE for Mission Critical Services**

Power efficiency, flexible options, power prioritization and constant PoE allow the 720XP series switches to support critical campus services like video security and emergency communications. 802.3at, af and bt power options deliver from 15-60W to RJ45 ports. The 720XP's platinum rated power supplies, coupled with its stingy 90W nominal consumption leaves an ample power budget for connected appliances and IoT devices. 650W or 1050W single or redundant power supply options allow administrators to customize power allocation and redundancy to meet their use cases and budget.

Power delivery prioritization extends power allocation while ensuring redundancy, thus allowing administrators to mix critical and non-critical services on the same switch. In the event of a power supply failure, the switch automatically de-energizes non-critical ports to preserve mission critical devices. Constant PoE allows the 720XP to continue providing power even during system maintenance or reboots. With cognitive campus monitoring, power configuration and utilization are tracked in real time and archived, so administrators can accurately monitor and report service levels and infrastructure power demands.
